1. Claims 7-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 7, the term "may have" (penultimate line) is indefinite.

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-9 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims recite a method for performing a mathematical function. The claimed invention comprises a plurality of mental steps whereby the claimed mental steps are non-statutory subject matter. Specifically, the claimed method steps can be practiced mentally in conjunction with pen and paper.

However, in order for such a claimed computer-related process to be statutory, the method claims must include either a step that results: (1) in a physical transformation outside the computer, (2) in a limitation to a practical application, or (3) performed specific machine/element(s). Accordingly, claims 1-9 are clearly directed to a non-statutory process.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sedlak (Applicants' admission Prior Art) in view of Walter (Applicants' admission Prior Art, "Faster Modular...").

Sedlak discloses, e.g., see Fig. 6(b) or Applicants' Fig. 9 (Prior Art), all the claimed invention except the "transforming the modulus into a transformed modulus that is greater than the modulus"; however, the feature is old and well known in the art. For example, Walter discloses a "fast modular multiplication by **operand scaling**", see page 316, section "3 Scaling the Modulus", first TWO paragraphs. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to combine Walter's "operand scaling" in Sedlak, thereby making the claimed invention, because the proposed device is a modular multiplication having the "transforming the modulus into a transformed modulus that is greater than the modulus" as claimed.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cited references is art of interest.
